

A close-up photograph of a person with curly brown hair and round glasses, wearing a white long-sleeved shirt. They are covering their eyes with both hands, but their mouth is open in a wide, joyful smile, showing their teeth. The background is a plain, light-colored wall. The image is tilted slightly to the right.

I work across branding, content production, and interactive media — blending art direction, film, and photography with creative technology. From digital tools to campaigns and identity systems, I design experiences that connect people with ideas in engaging, sustainable ways.

I'm a multidisciplinary creative working across branding, content production, and interactive media. My practice blends art direction, visual identity, film, and photography with a hands-on approach to creative technology — from building AR filters and web-based tools to directing campaigns and crafting visual narratives.

A collection of various objects is arranged on a light-colored wooden floor with a diagonal grain pattern. The objects include: a black digital camera with a yellow lens; a silver digital camera; a round wooden bowl containing marbled paper; three pencils (two orange, one silver); a small, colorful, textured object; a blue circuit board with various electronic components; and a square-shaped object made of yellow and white pasta. A black cable is connected to the silver camera and the circuit board.

Concept, Art Direction,
Film, Analog Photography

OEO Studio

stills from video

challenge

Create a short film promoting the OEO x Massimo rug collection that captured the texture and tactility of the materials.

approach

Developed concept and art direction, combining analog photography with motion sequences to express softness, depth, and handcraft.

outcome

A poetic campaign film and still series used across social media and showroom installations, strengthening the visual narrative of the collaboration.

Communicating material and
craftsmanship through film

Web Design, Motion,
Typography, Animation

bladr

animation from
photos of books

challenge

Refresh Bladr’s online presence and create motion content for their anniversary campaign.

approach

Co-developed the new website direction and implemented interactive animations that reference the tactility of printed matter. Produced motion pieces and social media assets for the anniversary celebration.

outcome

A renewed digital identity that connects Bladr’s experimental spirit with a clear, cohesive online experience.

Brdr. Krüger

Motion, 3d/AR, Video,

still from the
production

challenge

Many clients were unaware that Brdr Krüger's furniture could be customized in materials and finishes.

approach

Created an interactive AR filter allowing users to visualize different chair finishes in real time, supported by high-quality renders and a process video for the campaign.

outcome

The tool and campaign visuals helped communicate flexibility and craftsmanship, increasing engagement and client awareness during launches.

Campaign

Anour

still from the
video

challenge

Highlight Anour's handcrafted production methods during Copenhagen's 3 Days of Design festival.

approach

Developed the campaign concept and visuals focused on process, materials, and craft. Directed and produced photography and motion content that showcased the people behind the objects.

outcome

A cohesive campaign spanning video, stills, and showroom displays, reinforcing Anour's brand narrative of timeless craftsmanship.

quasiaqua

challenge

Develop an open visual practice to explore themes of transformation, materiality, and post-digital aesthetics through continuous experimentation. The goal was to create a space for process-driven works that connect art, ecology, and technology in an accessible, evolving format.

approach

Using Instagram as both sketchbook and exhibition space, I document experiments across video, photography, sound, and generative media — from analog interventions to AI-assisted visuals. The platform functions as a research log, testing new tools and visual languages while connecting with audiences beyond institutional spaces.

outcome

The work has been featured in online exhibitions and art publications, bridging physical and digital presence. I also made artworks for some album covers and other commission. @quasiaqua has become a reflection of my practice's core — fluid, collaborative, and in constant transformation.

Open-Source Tools,
Community

waterlike.tools

mockup of UI

challenge

Develop a digital-physical platform that empowers people to create everyday objects using local, recycled, and homemade materials. The goal was to encourage accessible, regenerative creativity rooted in community and ecological awareness.

approach

Conceived and designed waterlike.tools as a modular toolkit and studio initiative combining open-source digital guides with physical workshops. The project emphasizes circular materials, transparency, and collective design processes. It has been presented and tested at in Denmark engaging participants in co-creation and sustainable experimentation.

outcome

The platform functions as both an educational and creative ecosystem, connecting local materials, people, and ideas. It continues to evolve through public workshops and collaborations that blend design, ecology, and technology.

print at obra press

Mieciek

Product Details

- Risograph print on 240g Metapaper Rough
- 29.7 x 42 cm poster
- Limited edition of 23
- Numbered and signed by the artist

Riso colours used: fluorescent pink, blue, yellow.
Original design and art work by mixed-media artist Mateusz Mieciek

Artist bio

Mateusz Mieciek is a mixed-media artist, whose everyday practice evolves around pastels, skateboarding, communication and water. Trying to find something new at the intersection of art and technology.

challenge

Translating digital artwork into Riso prints often involves guesswork — the unpredictable overlap of inks makes it difficult to preview accurate results before printing. The goal was to create a tool that visualizes this process and supports experimentation while reducing material waste.

approach

Developed an interactive web-based simulation using p5.js that mimics the behavior of Riso inks, allowing users to preview layers, overprints, and textures in real time. The system was built as an open and educational tool to help artists understand the relationship between RGB design and CMYK-based Riso processes.

outcome

The prototype became both a creative playground and a practical production aid for small print studios and independent artists. It bridges digital and analog workflows, making print design more accessible, sustainable, and transparent.

spacja

Codin

challenge

Create a calm, open environment for collective reflection and making within fast-paced social and cultural contexts. The aim was to explore the “space between words” — moments of rest and exchange — through collaborative and material-based practices.

approach

Founded and co-facilitated spacja a traveling format that inhibits places in order to make space for breath and exploration . Each session began with a short guided self-massage to invite stillness and presence before creative work. The project was realized across diverse spaces tailoring to the environment from party to gallery

outcome

The workshops became quiet anchors for connection and expression, bridging language, craft, and care. They demonstrated how pauses can hold creative and social potential within collective experiences.
